COURSES OFFERED IN A FOREIGN LANGUAGE IN THE ACADEMIC YEAR
2017/2018

Department	Department of Information Sciences at the University of Zadar		
Description of the courses offered in a foreign language in the academic year 2017/2018			
Name of the course	Information Searching (BA/W)		
Name of the teacher	Jadranka Stojanovski, Ph.D., assistant professor Nikolina Peša Pavlović, assistant		
Number of ECTS credits	5	Semester	<input checked="" type="checkbox"/> autumn/winter <input type="checkbox"/> spring/summer
Teaching will be organized as	Lectures	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no	Consultations <input checked="" type="checkbox"/> yes <input type="checkbox"/> no
The courses will be organized as	Lectures	Seminars	Exercises
	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no	<input type="checkbox"/> yes <input type="checkbox"/> no	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no
Description of the course	The challenges of finding relevant information are constantly evolving. One of the primary information expert competencies is information management and the ability of targeted and quality retrieval, as well as finding relevant information. In this course students, will learn the basic concepts of information retrieval across different information sources, efficient use of library catalogues, Google Search, and different bibliographic and other databases (EBSCO, Web of Science Core Collection, Scopus, etc.). Students will acquire fundamental knowledge on the theory of information retrieval, databases structures, query search and other retrieval features such as truncation, stop words, Boolean and other retrieval models, and value-evaluation of web sources.		
Learning outcomes of the course	<p>By the end of the course, students will:</p> <ul style="list-style-type: none"> • master basic information retrieval concepts • identify and be able to choose the appropriate information source or system • master the usage of online information sources and systems such as online library catalogues, bibliographic and other databases, web search engines and knowledge bases • master the exact formulation and/or interpretation of search query, as well as its adjustment in different information source or system • learn how to conduct query search for a given topic • learn how to interpret, evaluate and present search results • master basic characteristics, advantages and disadvantages of different interfaces • master critical access to different information retrieval interfaces, different query syntax, retrieval options, as well as results • learn how to manage search results 		
The course is offered to	Incoming students who choose the above department as a home department	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no	
	All the incoming students	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no

Description of the course	To introduce students to the basics of IT applications in networked environment. Point to the development and widespread use of web			

COURSES OFFERED IN A FOREIGN LANGUAGE IN THE ACADEMIC YEAR
2017/2018

	<p>technology in academic, social, organisational and business environments. To introduce students to ways of using web technologies in a variety of multicultural and multilingual communities of users, particularly with regard to issues such as the design, implementation and testing of different applications based on the Web, including related software, database, interface and digital media. The seminars aim to discuss various social, ethical and security issues. Special attention will be given to following themes: web technologies; markup languages; hypertext / hypermedia; programming on the client side; programming on the server side; web servers and services; standards and standardization bodies; information architecture; effective communication; interface; navigation schemes; media types; digital media; digital library; media formats; tools for capturing, creating and producing and streaming media; development and production of web sites; database integration etc.</p>			
Learning outcomes of the course	<p>By the end of the course, students should be able to:</p> <ul style="list-style-type: none"> • describe the structure of the World Wide Web as a set of interconnected hypertextual documents, • use different markup languages and tools for creating websites, including • websites hosted on UNIX/Linux web servers, • use and integrate HTML/XHTML/XML syntax in creating and validating web documents, • use presentation technologies like CSS-a (Cascading Style Sheets) • create websites with effective information organizations, • learn basic web design concepts like information architecture, accessibility, usability etc. • describe common tools and techniques for recording digital media and digitizing analog media content • • learn basic server side technologies like JavaScript and AJAX 			
The course is offered to	Incoming students who choose the above department as a home department		<input checked="" type="checkbox"/> yes	<input type="checkbox"/> no

	The goal of the course is to teach fundamental programming skills which are			

COURSES OFFERED IN A FOREIGN LANGUAGE IN THE ACADEMIC YEAR
2017/2018

course	<p>applicable to a wide array of languages and problems.</p> <p>As the fundamental way of giving instructions to the computer, programming teaches both basic computer knowledge as well as empowers the students to solve many computer-solvable problems in a versatile and adaptable manner. Furthermore, programming teaches critical thinking as related to domain specific problems rather than just the usage of premade solutions.</p> <p>The language of choice for this course is Python, which is both very popular as the first programming language and as the swiss army knife of programming languages. Python is used in a wide array of computer related problems and is especially popular as relating to data programming which goes well with the broader goal of educating information experts.</p>		
Learning outcomes of the course	<p>After successfully passing this course, students will:</p> <ul style="list-style-type: none"> • understand basic programming concepts: programming, programming language, algorithm, application ... • understand and know how to use basic concepts in programming: value, type, variable, operator, function, conditional, loop ... • be able to recognise problems that are easily solved by programming • be able to write a simple python script/program 		
The course is offered to	Incoming students who choose the above department as a home department	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no

Description of the course	The goal of the course is to teach the fundamentals of structuring digital data for long term management and analysis.		
	The central technology for data in this respect in the computer age are the database management systems and specifically the relational model of data. The main part of the course is dedicated to the concepts and practical considerations of the relational model but it also teaches broader subjects to		

COURSES OFFERED IN A FOREIGN LANGUAGE IN THE ACADEMIC YEAR
2017/2018

	enable students to recognise various data needs as required for different goals and tasks.			
	During the course, students will primarily work with PostgreSQL, MongoDB and SQLite database systems but other software will also be mentioned.			
Learning outcomes of the course	After successfully passing this course, students will: <ul style="list-style-type: none"> • understand the basic principles of organization of structured data in the digital environment • understand several models of data organization as well as the difference between types of databases and appropriate use • be able to design an entity relationship data model • be able to implement a relational database • be able to write SQL queries • be able to implement a document oriented database 			
The course is offered to	Incoming students who choose the above department as a home department	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no

Exercises	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no			
			<input checked="" type="checkbox"/> yes <input type="checkbox"/> no	
Description of the course	<p>Philosophy may be understood as conceptual engineering. As such, genre of science fiction becomes the most philosophical form of literature/film because it engages in mental experiments.</p> <p>Number of Sci-Fi classics is considered to have philosophical implications: Kubrick & Clarke's "2001: A Space Odyssey" is considered to be metaphysical novel, Philip K. Dick's "Do Android Dream of Electric Sheep?" provides insightful take on artificial intelligence. In this course students will meet dozens of classics in sci-fi novels, movies and video games as a vehicle for philosophical topics as ethics, logic, epistemology, and aesthetics. Students will have reading and watching assignments and will have to produce an essay on the chosen philosophical topic.</p>			
Learning outcomes of the course	Students will be <ul style="list-style-type: none"> • acquainted with traditional philosophical problems through the form of science-fiction literature, movies and video-games; • able to identify basic philosophical issues in some classic works of sci-fi. 			
The course is offered to	Incoming students who choose the above department as a home department		<input type="checkbox"/> yes <input type="checkbox"/> no

Name of the course	Data Mining (MA/S)		
Name of the teacher	Krešimir Zauder, Ph.D., assistant professor		
Number of ECTS credits	5	Semester	<input type="checkbox"/> autumn/winter <input checked="" type="checkbox"/> spring/summer
Teaching will be organized as	Lectures	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no	Consultations <input checked="" type="checkbox"/> yes <input type="checkbox"/> no
The courses will be organized as	Lectures	Seminars	
	<input checked="" type="checkbox"/> yes <input type="checkbox"/> no	<input type="checkbox"/> yes <input type="checkbox"/> no	Exercises <input checked="" type="checkbox"/> yes <input type="checkbox"/> no
Description of the course	<p>The course serves as an introduction to data mining, related fields (e.g. exploratory data analysis, machine learning and text mining) and the broader field of data science.</p> <p>The goal of the course is to teach basics of “data wrangling” as related to getting the data from various structured and semi-structured sources and later procedures needed for the final goal of data analysis as well as the analytical procedures themselves. The course applies knowledge gained from introduction to programming and database design to practical problems related to exploratory data analysis such as: Where and how to get the data? How to transform the data to the form suitable for analysis? How to prepare and validate the data? How to form questions which the data can answer? How to answer those questions and how to validate the answers?</p> <p>The course is primarily Python based but uses a lot of third party libraries that make this language so popular for data work, such as Numpy, Pandas and Matplotlib.</p>		
Learning outcomes of the course	By the end of the course, students will: <ul style="list-style-type: none"> • understand the problems inherent to data-based research and related

Description of the course	<p>In this course students will be introduced to qualitative and quantitative research methods in information science. The course includes developing and writing of a research proposal. Students will be introduced to the range of research questions and issues that arise in the field of information sciences. The goal of this course is to prepare students to become productive members of the information science researcher community.</p>
